

Griffeye Intelligence Database (GID)

Connect and share intelligence with other investigators.

Within teams and across borders.

Are you looking for a solution to help break down information barriers, eliminate redundancy and reduce case cycle times?

The GID is designed to make information sharing a seamless process and to build on each other's casework by connecting investigators with each other. It allows multiple users from different teams, regions, or even countries. The result is stronger collaborations and increased efficiency when cutting through vast amounts of data.

KEY ADVANTAGES WITH GID

Seamless information sharing

Eliminate the manual elements of exchanging information. Hashes are easily uploaded to any shared GID and directly accessible to other users.

No latency

The positive effects of the engine scalability also apply to the number of users who can connect and utilize the database. There are no limits to how many users that can work on it simultaneously.

Powerful, scalable engine

GID has the capacity to handle large, and constantly growing, amounts of data over time. Capacity and performance remain just as efficient.

Build intelligence over time

The GID enhances intelligence by accumulating data over time. This allows access not only to current case data but also to historical cases and activities.

Connect to multiple databases

Establish connections to multiple databases, enabling collaboration with investigators nationally or internationally.

Enhanced scalability

Connect multiple GIDs to collaborate as a single, cohesive entity, bolstering performance and scalability.

Unlimited number of users

The positive effects of the engine scalability also apply to the number of users who can connect and utilize the database.
